WOODEN YOU LIKE TO KNOW

Greetings fellow woodworkers,

Well, September is coming to a close and the fall season is rapidly approaching. It is now that many of us try to make the most of our available shop time. I have certainly been busy in mine lately, making items to donate and sell at the upcoming Fall Harvest show, raffle pens, weddings gifts and Christmas presents. Lately my grass is too dry to need cutting much anyway.

As most of you know Ron Benson will be retiring from his job as treasurer of the club soon and we thank him for his many years of service. At last month's meeting, Dennis Byron volunteered to step in as Ron's replacement and he was accepted by a vote of the Executive board. Thank you Dennis. I am looking forward to working with you as I did Ron. Ron will continue to serve in his other capacities.

We recently received a nice thank you letter from the Lake County Historical Society thanking us for our participation in their show this year and inviting us to return next year.

Our club picnic was August 25h. We had a great turnout and I believe that everyone enjoyed themselves. A fantastic job was done by Dick Sader, his crew and all that helped out. Austin Bonta, the mayor of Portage was invited and attended. It was nice to meet him and we appreciate his presence.

On September 14th we went to the Porter County Historical Museum for their exhibit on local woodworking. It was very interesting. If you couldn't make it on that day, you should certainly try to check it out when you can before it is gone. Thanks to those that attended.

REMINDERS:

This month's meeting will be on September 26th. 7 pm at the Hobart Moose.

This month's program will be our annual silent auction. If you have items to sell, please bring them in and be sure to bring some cash if you are looking to buy. We will also have a presentation at the beginning of the meeting by Tim Ault from Von Tobels.

The final show opportunity of the year will be the Sunset Hill Harvest Festival September 27-29. We need donated items to sell and raffle sale pens made again. Setup for the show will be on September 26th at 2:00 pm. Please come and help and drop off your donated items to be sold.

Also, keep our toy program in mind, if you are considering submitting a group this year to receive toys (and please do if you know of a need), it helps our committee to have an approximate count of the number required as soon as possible.

See you at the next meeting, Jeff Snellgrove President NIWA

WOODWORKING TIPS

Hardware Storage

By: Erich Lage & Logan Wittmer

usually keep certain types of hardware on hand. This means buying large bags of hardware at the home center. Once you've opened the bag however, storing the

remaining pieces can be a pain. That was, until I opened my fridge one day and

the solution was staring me in the face.

Storage Containers. The solution, I found, came in the form of plastic food containers. They come in a variety of sizes and are often inexpensive. And, while they stack fairly well, I found that I was able to stay much more organized by

building a wall-mounted rack for them, as you see above.

The details needed for building it can be found in the drawing above.

Marking Cut Lines

When measuring material to be cut I find it helpful to put a little tick mark of the side to cut on. This simple action saves countless time remeasuring and helps me account for kerf, the thickness of the blade you are cutting with.

Kerf is the divergence between the left and right sides of the saw teeth, and any cutting will result in some loss of wood that is turned into sawdust. If you just cut directly on the marked line the blade kerf would eat into your measured piece, causing your cut to be inaccurate. This may not seem like a big deal, but if you've ever had a project be a 1/8" out of measurement you know how frustrating this can be.

The solution is to measure your piece and make a small tick to one side of the measured line, indicated which side to cut on. Once measured, line your blade up to the line with the blade on the ticked side, so that the kerf will be on one side of the line and not into your measured area. If you ever work with a buddy and are dividing labor this is a great trick to keep each other informed of the areas to cut.

I use this every time I mark cut lines, and it's a great habit to fall into.
